

## FORENSIC SOFTWARE FOR FACE RECOGNITION

### HIGHLIGHTS

- Detection and recognition of faces in photos and video sequences
- Descriptor invariant to pose, illumination and facial expressions
- Similarity metric for fast recognition with millions of enrolled individuals
- Support of vast number of image and video formats
- Solution targeting all major platforms

Eyedea Recognition’s Eyedentity is a ready-to-use forensic software for face detection and recognition, based on the results of long-term research in the field of computer vision. The user can manage a database of enrolled individuals, process images and videos acquired in cases and execute face similarity queries using a desktop application. Optimized for both speed and recognition performance, Eyedentity is an ideal solution to the problem of identification and verification based on face images.

Our software is being evaluated by NIST along with top face recognition vendors to provide unbiased comparison to the best of currently existing algorithms.

The software is being used by **EUROPOL, Counter Terrorism Unit and Police of the Czech Republic, Organized Crime Unit and Anti-drug Unit.**
